

Who is Bactronix®?

Bactronix is a science based microbial control company that helps to create healthier environments using our eco-responsible products.

The exclusive Two-Step Bactronizing™ Process is applied with an advanced electrostatic delivery system. The Two-Step process will eliminate bacteria, viruses, mold and odor.

Cross-Contamination In Your Gym

Cross-contamination is a major concern throughout a facility. In addition to common touch points, where hands come in contact with equipment, there are other areas of the body that could contract dangerous infections such as MRSA and HIV. The Bactronizing Process reduces the risk by treating 100% of all surface areas that can come in contact with the skin.

Why Bactronize Your Facility?

- Promotes Public Health and Safety
- Promotes Proactive, not Reactive
- Microbial Control Program
- Brings Greater Value to Your Membership Program
- Provides Continuous Monitoring Reports for Safety Compliance & Liability
- Safer Facility for Singles & Families to Join
- Feature Safer and Healthier Operations
- Mold Free & Fresher Smelling Environment
- Safer & Healthier Daycare Rooms

5.0 ★★★★★ Rating on Google:

"I was pleased with the service and the professionalism I experienced with Bactronix."

- Casey Purcell

"I had a mold condition in one of my buildings and Bactronix protected my tenants!"

- Lou Essey

Keep Your Athletic Facility Fit!

Speed + Strength + Endurance = Bactronizing Antimicrobial Protection!

Odors are part of the fitness center's "BIOLOGICAL FOOT-PRINT." The Bactronizing Process eliminates odors, mold and bacteria that develop over time. Our nanotechnology breaks down VOCs, providing a safer and fresher smelling environment.

Exercise Balls

Members use exercise balls for a variety of stretch activities for physical therapy and muscle strength. Just about every part of the human anatomy will come in contact with the entire surface area which accelerates the cross contamination process.

CROSS-CONTAMINATION

Bacteria and Viruses During cold/flu seasons and pandemics, such as Covid-19 of 2020, cross-contamination can occur in gyms on high touch points and even the air we breathe. Our Two-Step Bactronizing Process eliminates bacteria and viruses to help maintain a healthier facility.

Exercise Mats & Steppers

Bacteria and biofilm can easily build up on these frequently used items. Steppers and mats are high targets for microbial contamination. Shoes, hands and human perspiration are the perfect vehicles for bacteria growth and unwanted odors.

Treadmills

Treadmills, ellipticals, and cycling equipment provide several work-out options for members to choose. This constant contact with the machine along with the perspiration builds layers of biofilm where bacteria continue to multiply.

Free Weights

Layers of biofilm and bacteria can build up on weights, bars, flat incline decline benches, leg extensions and preacher curls.

The Bactronizing Seal of Certification is a Symbol of Health and Safety
